

FPT DRIVELINE

To ensure a complete range of powertrain solutions for the on-road market, FPT develops and manufactures high-performance axles for all categories, from light commercial vehicles to heavy-duty trucks, in urban areas or on land, from local deliveries to long-distance transport.

With over 50 years of experience in the driveline industry — and production reaching one axle or transmission every two minutes — FPT offers proven expertise and continuous innovation to meet the evolving needs of both light and medium-heavy duty applications.

Deliver last-mile traction with the 5890 high-traction axle, equipped with wheel-end hydraulic motors for additional traction when it's most needed. The engageable hydrostatic front-drive axle adds instant power on demand — in both forward and reverse.

Rear driving axles and front axles, both driven and non-driven, are built to support up to 60 tons of GVW. Offering high flexibility, we provide both axles with disc brakes and axles with drum brakes, single or hub-reduction axles, and tandem or solo configurations, depending on the vehicle's mission, whether on-road or off-road. A differential lock is also available to ensure better traction on slippery or uneven surfaces.

SPECIFICATIONS

Model:	5890
Application:	Heavy Trucks
Type:	Front Axle

GAW (ton):	9
GVW (ton):	40
Brake System:	Disc
Oil quantity (l):	No Oil
Weight (kg):	456
Axle ratio range:	Not Applicable
